DETAILED ACTION

In a preliminary examination, it is noted that claim 27 recites sequences with no sequence identifiers (SEQ ID NO:). Applicant, therefore, is required to identify the sequences of parts (a) and (b) of claim 27 by SEQ ID NO:, or to submit new sequence listings comprising said sequences.

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 27-43, drawn to a disease resistant transgenic plant, seed thereof, and a plant transformation method.

Group II, claim(s) 44-48, drawn to a method of selecting a plant using antibody, and antibody reactive to a specific polypeptide sequence .

The inventions listed as Groups I-II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

Inventions I and II are not so linked by a single special technical feature because they are drawn to different methods using functionally and structurally different products having different effects and uses. The special technical feature of Group I that is not recited in Group II is the plant transformation method. The special technical feature of Group II that is not recited in Group I is the antibody and selection of plants using said

antibody.

For each of the inventions I and II, Applicant is also required to elect one sequence. For the invention of Group I, Applicant is required to elect one DNA sequence or a DNA sequence encoding one of the polypeptides of SEQ ID NO: 2, 6, 10, 14, 16, 20, 26, 27 or 28. For the invention of Group II, Applicant is required to elect one isolated polypeptide sequence from claim 28.

The nucleotide sequences of the claims (or the encoded proteins), are not so linked by a single special technical feature because there is no shared significant structural element between the nucleotide sequences listed in claim 1 (or the encoded proteins). Therefore, the nucleotide/protein sequences of the claims are not so linked as to form a single general inventive concept under PCT Rule 13.1.

Therefore, for all the reasons discussed above, invention I-II lack unity.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Art Unit: 1638

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
